FCB Marble Security

Why FCB Marble Security for Financial Transactions:

Occurrences of account takeover, fraud and identity theft have increased significantly over recent years. Cybercriminals are using sophisticated methods (malware, spyware, phishing, keylogging, man-in-the-browser, etc.) to obtain access to accounts and create fraudulent transactions out of these accounts. Phishing and malware attacks have more than doubled in the last 12 months resulting in potential losses exceeding $1 billion and they are occurring locally. FCB Marble Security offers you the ultimate protection against such attacks, theft of your credentials and protection of your assets and information.

FCB Marble Security Features and Benefits:

Government Grade Online Security: The world's most sensitive and security conscious companies, including defense, intelligence and civilian government agencies, already entrust their security to Marble Security.

Secure Computer Environment: When accessing FCB Marble Security, a secure and private "tunnel" browser connection is made, independent of your computer and operating system, that protects you from malware, host applications and other hacker ploys. Marble Security provides you encryption of your keystrokes and information so that they cannot be captured or altered unknowingly.

Ease of Use: Quickly download the Marble Security security application to your computer and just click on the FCB Marble Security icon from your desktop to perform your online banking or just browse the web. There is no need for tokens or a USB device to gain access – it's just like clicking on any other browser to start an Internet session.

Online Banking Experience: Nothing changes in your online banking experience while using FCB Marble Security; you will have the same logon credentials, authentication, look and feel, and functionality. There is nothing new to learn or device needed to gain online access or conduct transactions and everything remains exactly the same as you are accustomed.

Access to Other Websites: While most security applications limit users solely to an online banking site, FCB Marble Security protects your information by allowing you to securely access most domestic websites. Marble Security not only allows access to your online banking and other financial websites in an encrypted, secured environment, but also provides you the same encrypted protection while browsing the web.

Peace of Mind: With FCB Marble Security you can perform online banking and web browsing without fear of your personal information being compromised or stolen. Contact us at 301-620-1400 to obtain peace of mind when conducting transactions online.
